About EuroTeleServ

EuroTeleServ

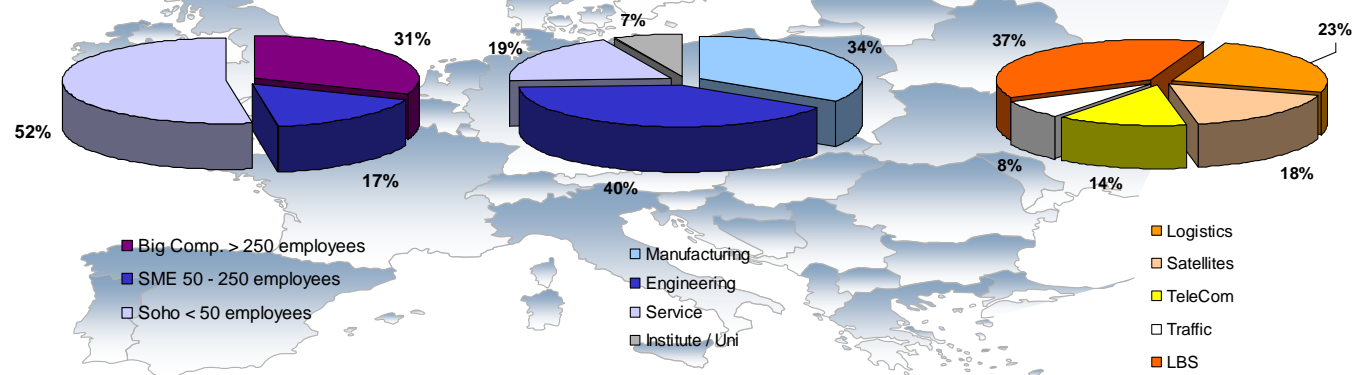

- Based in Luxembourg as a Non-Profit Organization
- Is an Initiative to empower GNSS* application related R&D projects in the scope of navigation, communication and geo information services and focussing on the convergence of navigation, communication and Earth observation
- Platform to promote the development of downstream GNSS applications & services
- Acts as an incubator for innovation, bringing together as many players and skill sets as possible
- Offers an instrument to claim, participate and transfer international public funding into national economic value
- Bridges the gap between space infrastructure and service providers' interests
- Has a base of active members who share the common goal of achieving a maximum level of participation in R&D projects related to GNSS applications and services
- Federates industries and forms alliances combining a broad skill set for the generation of new ideas, new concepts and new R&D projects
- Identifies new applications which offer significant benefits to European and national economies
- Builds high-class consortia to stimulate R&D projects and identifies sources of funding for those projects
- Unique pan-European approach incorporating geographic regions

* GNSS – Global Navigation Satellite System

Membership Benefits

Our network provides

- Access to political decision makers: EuroTeleServ's strong political ties steer the flow of R&D project ideas, concepts and funding
- Access to new business partners: EuroTeleServ enables networking with public institutions and other registered EuroTeleServ members
- Access to R&D Projects : EuroTeleServ members jointly work in consortia to participate in European and national R&D activities
- Participation in high profile international workshops and events
- Active support and integration of SMEs in international R&D projects
- Access to SatCom and SatEO/GMES partners: EuroTeleServ community represents all elements of the value chain
- Raise of competitiveness in international consortia
